Service Industries

for Sage ERP Accpac

Trade Job Costing[™] Service Industries *for Sage ERP Accpac*

Service organizations use sophisticated ERP application systems to manage the countless business transactions they incur everyday. A typical job can consist of multiple sales and purchase orders, invoices and payments, all of which are generated and negotiated between a number of vendors, suppliers and customers under a single trade job number. The vast complexity of this operational structure makes it difficult for companies to determine which jobs make business sense and which don't.

Trade Job Costing™ Service Industries for Sage ERP Accpac, is an integrated solution developed by SYSTRONICS llc for the award-winning Sage ERP Accpac software, to produce accurate and timely profitability reports for the jobs that service companies undertake:

- Tour operators will be able to determine their profit margins on specific holiday package tours which include flights, hotels, meals and excursions
- Freight forwarding companies will be able to determine the profitability of bulk shipments that involve distributing goods to a number of customers
- Advertising agencies will be able to forecast the profitability of specific client campaigns that use a number of advertising mediums, such as radio, television and print.

The application can be used as a forward-planning tool for any service organization that wants to identify the profitability of a particular job at any given time. In addition to tracking analytical data on both existing and potential jobs, Trade Job Costing™ Service Industries for Sage ERP Accpac, is particularly useful for fulfillment, commitment and margin analysis.
